

SKF

SKF technology is at work in virtually every industry. – energy-generating wind farms, aircraft flight control systems, paper plants and steel mills, even space exploration, to name a few.

Supported by the most sophisticated research facility of its kind in the world, we're continually refining the world's best technologies, assuring a technical edge in the marketplace for our company and our business partners.

Today, more than 100 years after we invented the world's first self-aligning ball bearing, the SKF brand stands for more than ever before. It stands for world-class quality, industry-leading innovation, and customer-focused resources that are unequalled in the world.
