

# DUMMY SOCKET - PLUG STORAGE

Universal plug storage is now available from Tectran. The **Dummy Socket** is a low cost, durable solution for plug storage problems. It can accept any J560 or J3082 style plug including 7-way, 7-way auxiliary, dual pole horizontal, and dual pole vertical plugs.

**Part No. 670-DS**  
**Stk. Code 77665**

Tectran's signature Bull Nose socket housing with extra thick mounting ears and lid

Durable metal lid permanently marked **"NOT POWERED"** for differentiation from other sockets

"Blank" socket insert allows for universal storage of any J560 or J3082 style plug, regardless of the pin configuration

Socket footprint features slotted mounting holes and matches standard J560 style sockets for easy installation

The **Dummy Socket** can be mounted on both tractors and trailers for secure storage of electrical connections when they are not in use. It is the perfect accessory for fleets with tractors that have a 4-In-One AirPower Line or a 4th coil such as a charging, tarping, or auxiliary coil. When the 4th connection is not in use or the tractor is paired with a trailer that cannot accept it then it can be safely stored in the Dummy Socket until it is needed again.

Typical plug caddies store the plug vertically, which stresses the cable and exposes the back of standard plugs to water and other contaminants. The Dummy Socket holds connections in the normally installed, horizontal position instead to help protect the assembly from damage during storage.
